

The World Environmental Organization ([World.Org](#)) is devoted to the preservation of the natural diversity of plant and animal species, and their habitats, through the prevention of environmental degradation and destruction. World.Org develops and implements scientific strategies for decreasing fossil fuel use, preventing climate change, and preserving plant and animal species and their habitats.

World.Org educates the public about a wide variety of environmental topics including preservation of natural habitats, organic farming, endangered species preservation, [nutritional treatments](#) for health conditions, [renewable energy](#), the reduction of [fossil fuel consumption](#), climate change, animal rescue on the [Rescue Me](#) ! network, and other related environmental topics.

World.Org disseminates the results of its research and studies on the widest possible basis through its Internet websites, printed publications, [nature centers](#) and other public exhibitions.
